QMP 50 –The POS solution for price conscious shop owners

Small foot print, plenty of articles and departments, simple operation plus cashing functions are the main features, which shop owners demand from their cash register. Our compact model QMP 50 fulfills all these requirements.

The QMP 50 comes with fast Easy-Load printer, one or two station, graphical LCD displays, two serial ports for peripherals like scanner/scale, one USB port for comfortable PC programming as well as reporting and a cash drawer port.

QMP 50 SERIES

Much like the CR 20 series, the QMP 50 relies on a 32-bit architecture to handle large workloads. A graphical LCD rear display allows the customer to monitor every scan and/or manual input – a main requirement for many fiscal countries. Naturally, this cash register comes with the internationally successful QMP Software, where the number of PLUs, departments, clerks and memory space for reports is dynamically programmable and thereby furnishes the flexibility you need in today's competitive market place.
